

### **CI/CD Experience at Flexwind**

During my internship at Flexwind, I actively contributed to the implementation and maintenance of CI/CD pipelines, leveraging tools such as Git, GitHub, and Docker. My responsibilities included managing version control through Git and GitHub, ensuring seamless collaboration and integration of code across the development team. I utilized Docker to containerize applications, enabling consistent environments for testing, staging, and production.

I also automated workflows to streamline the build and deployment processes, reducing deployment times and enhancing code quality. These experiences strengthened my understanding of modern development practices and emphasized the importance of automation, collaboration, and iterative delivery in software engineering.
